Professional Summary

Backend-focused SDE with hands-on experience building real-time, secure, and scalable backend systems using Node.js, Express.js, TypeScript, and MongoDB. Seeking an SDE role to apply production-grade system design and backend engineering to high-scale applications.

Education

KPR Institute of Engineering and Technology	2023 - 2027
Bachelor of Computer Science and Engineering (Artificial Intelligence and Machine Learning)	8/10 CGPA

Experience

Software Development Engineer Intern — Mavericks	March 2025 – May 2025
---	-----------------------

- Built a multi-layered fraud detection system (device, phone/email, IP, behavior signals) to stop duplicate free-trial abuse on a 20K+ user Play Store app, cutting fraudulent signups by ~8–9%.
- Implemented the detection logic in Node.js, Express, and MongoDB, integrated into the existing signup/auth flow with no disruption to legitimate users.

Data Science Intern — CodSoft	Dec 2024 – Jan 2025
--------------------------------------	---------------------

- Engineered Python data pipelines integrating REST APIs to automate data retrieval and preprocessing, and built ML inference pipelines structured for seamless integration with backend REST API endpoints.
- Maintained a Git-based, version-controlled codebase following clean architecture principles across collaborative workflows

Projects

Live Chess Website	GitHub
---------------------------	------------------------

- Built a real-time multiplayer chess platform with a separated WebSocket server architecture, room-based matchmaking, and server-side move validation using chess.js to prevent cheating.
- Designed a PostgreSQL + Prisma persistence layer for users, games, and Elo-based ratings, with Redis as a write-buffer queue absorbing real-time move writes before batch persistence.
- Implemented JWT authentication (bcryptjs) with GitHub/Google OAuth2, deployed on a split architecture — React frontend on Vercel, backend on Render.

Bank Backend Ledger	GitHub
----------------------------	------------------------

- Built a double-entry banking ledger with RESTful APIs for fund transfers, computing balances on-demand via MongoDB aggregation over an immutable, append-only ledger for full auditability.
- Implemented atomic multi-document transactions (Mongoose sessions) with idempotency keys to prevent duplicate transfers, secured via JWT auth and Gmail OAuth2 email notifications.

LiveCodeX	GitHub
------------------	------------------------

- Built a real-time collaborative coding interview platform with a shared code editor, HD video/chat via Stream SDK, and multi-language code execution using the Piston API.
- Implemented room-based session management with Clerk authentication, Inngest background job processing, and a personal dashboard for tracking sessions, deployed on a split Vercel/Render architecture.

Technical Skills

Programming Languages: Java, JavaScript, TypeScript, Python, SQL

Backend: Node.js, Express.js, REST APIs, WebSockets

Database: MongoDB, PostgreSQL

Tools: Git, GitHub, Postman

Leadership & Activities

- Executive Committee Member, **IEEE Computational Intelligence Society (CIS)**
- Social Media Manager, **NeuraNest**
- Campus Ambassador, **Fractal Analytics (IQIGAI)**
