Professional Summary

Backend-focused Software Engineer skilled in building scalable REST APIs and real-time applications using JavaScript, Node.js, Express.js, and MongoDB. Experienced in designing modular backend systems, handling concurrent requests, and optimizing performance. Strong foundation in Data Structures, OOP, and system design principles.

Education

KPR Institute of Engineering and Technology	2023 - 2027
Bachelor of Computer Science and Engineering (Artificial Intelligence and Machine Learning)	8.5/10 CGPA

Experience

Data Science Intern — CodSoft	Dec 2024 – Jan 2025
- Built Python-based data pipelines integrating REST APIs to automate data retrieval and preprocessing. - Designed modular workflows for data validation and transformation, improving consistency and reducing manual effort. - Built and evaluated machine learning models, structuring inference logic for seamless backend integration. - Maintained a version-controlled codebase using Git, ensuring clean architecture and efficient collaboration.	

Projects

Live Chess Website	GitHub
- Developed a real-time multiplayer chess application using Node.js, Express.js, and WebSockets, enabling low-latency bidirectional communication. - Implemented server-side game state management with room-based sessions, supporting multiple concurrent matches. - Designed event-driven communication for move validation and updates, ensuring consistent real-time synchronization across clients.	

Bank Transaction System	GitHub
- Designed RESTful APIs for account creation, balance updates, and transaction processing, enabling structured client-server communication. - Implemented transaction workflows ensuring atomic operations and data consistency during concurrent requests. - Optimized database queries and data handling to improve reliability and efficiency of transaction processing.	

LiveCodeX	GitHub
- Developed a real-time collaborative coding platform using Node.js, Express.js, and WebSockets, enabling simultaneous multi-user code editing. - Implemented room-based session management supporting concurrent users with consistent shared state synchronization. - Designed low-latency event-driven updates to ensure fast and reliable real-time collaboration across clients.	

Technical Skills

Programming Languages: Java, Python, JavaScript, SQL
Backend: Node.js, Express.js, REST APIs, WebSockets
Database: MongoDB
Tools: Git, GitHub, Postman
Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), System Design

Leadership & Activities

- Executive Member, IEEE Computational Intelligence Society (CIS)** — Contributed to organizing technical events and content creation.
- Social Media Manager, NeuraNest** — Managed digital content and engagement across platforms.
- Campus Ambassador, Fractal Analytics (IQIGAI)** — Represented the organization and promoted initiatives within campus.
